NASCO NAMES TERRY JONES DIRECTOR OF BUSINESS DEVELOPMENT

(Gardena, CA) Nasco Aircraft Brake, Inc. has named Terence F. Jones as its director of business development. Prior to his appointment, Jones served in engineering and technical sales management positions with both Honeywell and Dunlop.

Jones has a 40-year career in the aircraft wheel and brake industry and has been involved with the engineering and sale of virtually every large commercial aircraft wheel, brake, and brake control system.

“We are delighted that Terry has joined us,” said Dan Aron, president of Nasco. “He is a hands-on leader with exceptional experience who fully understands the airline business and will compete relentlessly to help us grow in that market.”

Jones said, “Nasco is a good company with great people, customers, and products. I am excited by this opportunity to help airlines reduce their operating costs with our aftermarket brake components. The time has come for airlines to break the OEM monopoly on products and prices.”

Jones will be based in San Marcos, Texas.

Nasco presently manufactures replacement steel and carbon brake components for commercial and military operators of B727, B737, B747, Saab 340, Fokker 100, C-130, KC-135, B-52 and other aircraft.

Nasco is located at 13300 Estrella Ave., Gardena, California 90248. For more information call Thomas Pratt at (574) 289-7581 or visit their website at www.nascoaircraft.com.
